(1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) an bost cell containing the vector; (3) an isolated polypeptide; (5) producing the polypeptide; (5) inhibiting cellular to proliferation or the activity of a gene in an operon required for proliferation or that has an activity agency required for proliferation or that has an activity agency required for proliferation, (7) identifying a compound that inhibits proliferation; (8) identifying a gene required for cellular proliferation or the biological pathway in which a proliferation or that that inhibits cellular proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound sactivity, (11) a culture comprising strains in which the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound sactivity, (11) a culture comprising strains in which the test compound that inhibits proliferation of an organism. The antisense nucleic acids are useful for proliferation of an organism. The antisense nucleic acids are useful for groliferation of an organism. The antisense nucleic acids are useful for for acellular proliferation in cells other than S. aureus, S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence acids required for proliferation in cells other than S. aureus, S. typhimurium, C. patent did not form part of the printed sequence assential genes necessity from WIPO at the target prokaryotic essential genes where the sequence data for this continued for proliferation of an organism.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            124
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        184
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             244
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         KGPYLQMNTETLSQVNPERMFIMTNKASSNEPSLKELEKDPVWKKLNAVKNQRVDILDRD 304

                                                                                                                                                                                                                Isolating microbial target surface exposed immunogenic polypeptides, by immunizing host with microbial membrane-associated polypeptides to produce antibodies and using antibodies to isolate target polypeptides.
                                                                                                                                                                                                                                                                              The invention relates to the isolation of target surface exposed immunogenic polypeptides (SEIP) from microorganisms. The SEIP's of the invention are receptors of iron-binding molecules. The activity of polypeptides of the invention may be described as antibacterial, fungicide and protozoacide. Pharmaceutical compositions based on the polypeptides of the invention are useful for treating infections and diseases caused by microbes including bacteria, fungi and protozoa in a patient. They are also useful for topical disinfection in an animal or mammal e.g. human. The current sequence represents an SEIP of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Staphylococcus aureus. A composition comprising the S. aureus protein, a nucleic acid encoding the protein, or an antibody to the protein, is useful as a pharmaceutical, particularly as a vaccine for treating or preventing infection due to Staphylococcus bacteria, specifically an infection caused by S. aureus. The composition is particularly useful for treating or preventing sepsis in a patient. The composition can also be used for diagnostics. The protein is also used in an assay for enzymatic studies and as a target for antibiotics. This sequence represents one of the novel S. aureus proteins of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             85
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ģ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            genes and encoded proteins from sition comprising the S. aureus protein,

The invention relates to antisense inhibitors of genes essential to prokaryotic cellular proliferation, their use in identifying the genes, their use in the discovery of novel antibiotics, the essential genes themselves and the encoded proteins. The prokaryotes used are Escherichia coli, Staphylococcus aureus, Salmonella typhi, Klebsiella pneumoniae, Pseudomonas aeruginosa and Enterococcus faecalis. The invention is also useful for the identification of potential new targets for antibiotic development. The antisense nucleic acids can also be used to identify proteins used in proliferation, to express these proteins, and to obtain antibodies capable of binding to the expressed proteins. The proteins can antibodies capable of binding to the expressed proteins. The proteins can antisense nucleic acid sequence is also useful to screen for homologous nucleic acids which are required for cell proliferation in a wide variety

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  prokaryotic cellular proliferation, their use in identifying the genes, prokaryotic cellular proliferation, their use in identifying the genes, their use in the discovery of novel antibiotics, the essential genes themselves and the encoded proteins. The prokaryotes used are Escherichia coli, Staphylococcus aureus, Salmonella typhi, Klebsiella pneumoniae, coli, Staphylococcus aureus, Salmonella typhi, Klebsiella pneumoniae, coli, Staphylococcus aureus, Salmonella typhi, Klebsiella pneumoniae, coli, staphylococcus aureus, Salmonella typhi, Klebsiella pneumoniae, coli, staphylococcus aureus, Salmonella typhi, Klebsiella pneumoniae, coli seful for the identification of potential new targets for antibiotic consection protein neucleic acids compounds in rational drug discovery programmes. The proteins antisense nucleic acid sequence is also useful to screen for nomologous nucleic acids which are required for cell proliferation in a wide variety of organisms. The present sequence represents an essential prokaryotic cellular proliferation protein. Note: The sequence data for this patent did not format directly from WIPO at the wipo.int/pub/published_pct_sequences

The invention relates to antisense inhibitors of genes essential to prokaryotic cellular proliferation, their use in identifying the genes, their use in the discovery of novel antibiotics, the essential genes their use in the discovery of novel antibiotics, the essential genes themselves and the encoded proteins. The prokaryotes used are Escherichia coil, Staphylococcus aureus, Salmonella typhi, Klebsiella pneumoniae, seleculation and Enterococcus facealls. The invention is also useful for the identification of potential new targets for antibiotic development. The antisense nucleic acids can also be used to identify antibodies capable of binding to the express these proteins. The proteins can used to screen compounds in rational drug discovery programmes. The proteins can used to acreen compounds in rational drug discovery programmes. The present equance is also useful to screen for homologous cullicate acids which are required for cell proliferation in a wide variety of organisms. The present sequence represents an essential prokaryotic cellular proliferation protein. Note: The sequence data for this patent celectronic format directly from WIPO at cellular proliferation in the printed specification, but was obtained in celectronic format directly from WIPO at

The invention relates to a novel method for identifying, isolating and producing hyperimmune serum-reactive antigens from a pathogen, tumour, allergen, a tissue or host prone to auto-immunity, where the antigens are used in a vaccine, comprises providing antibody preparation from a plasma pool of a type of animal, or individual sera with antibodies against the pool of a type of animal, or individual sera with antibodies against the specific pathogen, tumour, allergen, tissue or host prone to auto-immunity. The hyperimmune serum-reactive antigens comprising any of the 62 sequences of 53-2261 amino acids fully defined in the specification, or their hyperimmune fragments are useful for the manufacture of a parameteutical preparation, against 8. aureus or 8. epidermidis. The preparation of antibodies is useful for the manufacture of a medicament of preparation of antibodies is useful for the manufacture of a medicament of cor treating or preventing staphylococcal infections or colonisation against 8. aureus or 8. epidermidis. The autibody preparations may also be used for diagnostic and imaging purposes. Other conditions that can be treated include cancer, autoimmune diseases or infections caused by viral (e.g. Hut), hepatitis A, B or C), fungal or protozoan pathogens. This advance represents a staphylococcal protein relating to the method for identifying and producing pathogen specific antigens of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            73 VALDVKPVGIADDNKKNRIIKPLRDKIGKYTSVGTRKQPNLEEISKLKPDLIIADNNRHK 132

the 6213 antiesnes sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are:

CC (1) a vector comprising a promoter operably linked to the nucleic acid encoding a promoter operably linked to the nucleic acid comprising a promoter operably linked to the nucleic acid conditions and inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated contisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular crowding the polypeptide; (6) inhibiting cellular crowding the polypeptide; (7) indentifying a compound that influences the activity of the gene product or that has an activity against a biological pathway contained for proliferation, or that inhibits cellular proliferation; (8) identifying a gene required for cellular proliferation or the biological pathway in which a proliferation-required gene or its gene product lies or a gene on which the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound, activity; (11) a culture comprising strains in which the extent confouct is overexpressed or underexpressed; (12) determining the extent to which each of the strains is present in a culture or collection of confounts; or (13) identifying the target of a compound that inhibits the confound confourt is overexpressed or underexpressed; (12) determining the extent confounts; or (13) identifying the target of a compound that inhibits collection of confounts. The antisense nucleic acids are useful for dentifying proteins or screening for homologous nucleic acids required for the provery properame or for searching in antisense uncleic acids required for collidar and provery properame or for candidate molecules for rational
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  screening
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  drug discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence is encoded by one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to an isolated nucleic acid comprising any one of
                                                                                                                                                               Antisense; prokaryotic essential gene; cell proliferation; drug design.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Zyskind JW;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    SEIP; surface exposed immunogenic polypeptide; iron-binding; receptor; antibacterial; fungicide; protozoacide; infection; disinfection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to the isolation of target surface exposed immunogenic polypeptides (SEIP) from microorganisms. The SEIP's of the invention are receptors of iron-binding molecules. The activity of polypeptides of the invention may be described as antibacterial, fungicide and protozoacide. Pharmaceutical compositions based on the polypeptides of the invention are useful for treating infections and diseases caused by microbes including bacteria, fungi and protozoa in

antieera. DNA was isolated from clones expressing SEIPs, and amino acid sequences were deduced and analysed for conserved and/or functional domains. The present SEIP has sequence homology with the siderophore family of periphasmic binding proteins. The invention provides methods for the identification, production and recovery of SEIPs. The SEIPs can be used individually, or in combination, to produce anti-staphylococal antibodies useful in passive or active immunisation strategies to prevent or contain staphylococcal infection. They can also be used to develop
                                                                                                                                                                                                                                                                                                                                                                        192

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           249
                                                                    The invention relates to novel genes and encoded proteins from Staphylococcus aureus. A composition comprising the S. aureus protein, a nucleic acid encoding the protein, or an antibody to the protein, is useful as a pharmaceutical, particularly as a vaccine for treating or preventing infection due to Staphylococcus bacteria, specifically an infection caused by S. aureus. The composition is particularly useful for treating or preventing sepsis in a patient. The composition can also be used for diagnostics. The protein is also used in an assay for enzymatic studies and as a target for antibiotics. This sequence represents one of

Protein encoded by Prokaryotic essential gene #24493

```
the invention transes by an isolated in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated polypeptide apolypeptide whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation or that has an activity against a biological pathway required for the proliferation, (7) identifying a compound that influences the activity of the gene product or that has an activity against a biological pathway required for repulse for cellular proliferation or the biological pathway is a gene required for cellular proliferation or the biological pathway is a gene required for cellular proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound's activity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent or organism acts; (9) manufacturing an antibiotic acids are useful for strains; or (13) identifying the target of a compound that inhibits the proliferation of an organism. The antisense nucleic acids are useful for proliferation of an organism. The antisense nucleic acids are useful for centifying proteins or screening for homologous nucleic acids activity in a proliferation in cells other than S. aureus, S. typhimurium, K. Dienungiae or P. aeruginosa. The present sequence is encoded by one of required form part of the printed specification, but was obtained for this or the printed specification, but was obtained for this properation of the printed specification, but was obtained for this properation of the printed specification.
                                                                                                                                                                                                                                                                                                                                                                             New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs.
                                                                                                Zyskind JW;

the nucleic acid inhibits proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid

cof the nucleic acid inhibits proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid

concing a polypeptide whose expression is inhibited by the antisense

concleic acid; (2) a host cell containing the vector; (3) an isolated

contisense nucleic acid; (4) an antibody capable of specifically binding

contisense nucleic acid; (4) an antibody capable of specifically binding

the polypeptide, (5) producing the polypeptide; (6) inhibiting cellular

contisense nucleic acid; (4) an antibody capable of specifically binding

the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular

contisense nucleic acid; (4) an antibody capable of specifically binding

the polypeptide; (5) producing the acity against a biological pathway

contiferation or that has an activity against a biological pathway

contiferation; (7) identifying a compound that influences the activity of

the gene product or that has an activity against a biological pathway

confound agene required for cellular proliferation of an

confound activity; (1) a culture comprising strains in which the estent

compound activity; (1) a culture comprising strains in which the gene

confound activity; (1) a culture comprising strains in which the gene

confound sectivity; (1) a culture comprising strains in which the gene

confount is overexpressed or underexpressed; (12) determining the extent

confounts; or (13) identifying the target of a compound that inhibits the

confounts; or (13) identifying the target of a compound that inhibits

confounts; or (13) identifying the target of a compound that inhibits

confounts; or (13) identifying the target of a compound that inhibits

confounts; or (13) identifying the target of a compound that inhibits

confounts or (13) identifying the target of a compound that inhibits

confounts; or (13) identifying the targe
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               K. pneumoniae or P. aeruginosa. The present sequence is encoded by one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from Will from Will at the wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     43 VEIKHEEGTTKVPKHPKRVVVLEYSFVDALVALDVKPVGIADDNKKNRIIKPLRDKIGKY 102
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   82
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      drug discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Zyskind JW;

```
proteins from Photorhabdus luminescens. The isolated sequences are correcting from Photorhabdus luminescens. The isolated sequences are sources of probles and primers for detecting the genome of P. luminescens and related species; to study polymorphisms; for gene analysis and for detection/amplification of the genes. Antibodies (Ab) raised against the CO Pypeptides encoded by the genes are used for detection/identification of P. luminescens, e.g. in foods. The genes, proteins, Ab and cells that carry a gene-containing vector are used to select compounds that carry a gene-containing vector are used to select compounds that carry a gene-containing vector are used to select compounds that carry a gene-containing vector are used to select compounds that carry a gene-containing vector inhibit expression of the genes in plants, animals or microorganisms other than P. luminescens and are able to alter response or sensitivity to toxins and antibiotics produced by P. Combinant production of the proteins, particularly toxins and antibacterials useful as insecticides, bactericides and fungicides. The antibacterials vectors containing the genes and Ab are also useful charapeutically (to treat microbial infection by bacteria or fungi that are sensitive to P. luminescens-encoded toxins or antibiotics) and as

the 6213 antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated or polypeptide or its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide or its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation, or that has an activity against a biological pathway confideration, (7) identifying a compound that influences the activity of required for proliferation, or that inhibits cellular proliferation, (8) identifying a gene required for cellular proliferation or the biological pathway in which a proliferation required gene or its gene product lies or a gene on which the test compound that inhibits proliferation of an corganism acts; (9) manufacturing an antiblocit; (10) profiling a compound; sactivity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent of product is overexpressed or underexpressed; (12) determining the extent of compound that inhibits the proliferation of an organism. The antisense nucleic acids required for proliferation to isolate candidate molecules for rational correctivity proventy programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, K. patent did not forme part of the printed specification, but was obtained to the print of the printed specification, but was obtained to the printed specification, but we obtained to the printed specification, the printed specification, the printed specification, the printed specification of the printed speci

The invention relates to antisense inhibitors of genes essential to prokaryotic cellular proliferation, their use in identifying the genes, their use in the discovery of movel antibiotics, the essential genes themselves and the encoded proteins. The prokaryotes used are Escherichia coli, Staphylococcus aureus, Salmonala typhi, Klebsiella pneumoniae, Pseudomonas aeruginosa and Enterococcus faccalis. The invention is also casful for the identification of potential new targets for antibiotic proteins used in proliferation, to express these proteins, and to obtain antibodies capable of binding to the expressed proteins. The proteins can antibodies capable of binding to the expressed proteins. The present compounds in rational drug discovery programmes. The antisense nucleic acid sequence is also useful to screen for homologous nucleic acids which are required for cell proliferation in a wide variety of of organisms. The present sequence represents an essential prokaryotic cellular proliferation protein. Note: The sequence data for this patent directly from MIPO at

The invantion relates to an isolated nucleic acid comprising any one of
the 6213 antisense sequences given in the specification where expression
of the nucleic acid inhibits proliferation of a cell. Also included are:
(1) a vector comprising a promoter operably linked to the nucleic acid
encoding a polypeptide whose expression is inhibited by the antisense
outleic acid; (2) a host cell containing the vector; (3) an isolated
polypeptide or its fragment whose expression is inhibited by the
antisense nucleic acid; (4) an antibody capable of specifically binding
the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular
proliferation or the activity of a gene in an operon required for
proliferation or the activity of a gene in an operon required for
the gene product or that has an activity against a biological pathway
required for proliferation, or that inhibits cellular proliferation; (8)
identifying a gene required for cellular proliferation or the biological
compound's activity; (11) a culture comprising strains in which the gene
compound's activity; (11) a culture comprising strains in which the gene
compound's activity; (11) a culture comprising strains in which the strains
compound's activity; (11) a culture comprising strains in which the strains
compound's activity; (12) determining the extent
compound's or intifying the target of a compound that inhibits the
compound's proliferation of an organism. The antisense nucleic acids required
confideration of an organism. The antisense nucleic acids required
dence of the definity and proliferation or for solate encladidate molecules for rational
dence of the dence of the strains is present in a culture or collection of
confideration of an organism. The antisense mucleic acids required
confideration of an organism. The antisense confideration of an organism.
The antisense and definity maniformed acids required
confideration of an organism of the strains of the strains of the strains of the strains of the strains of the strains of the strains of the str
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      drug discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs.
                                                                                                                                                                                                                                                                                                                                                                                                         Antisense; prokaryotic essential gene; cell proliferation; drug design.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Zyskind JW;

Also included are:
(1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated polypeptide or its fragment whose expression is inhibited by the

continued and the polypeptide; (6) inhibiting cellular prolypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation; (7) identifying a compound that influences the activity of the gene product or that has an activity against a biological pathway confideration, or that inhibits cellular proliferation; (8) identifying a gene required for cellular proliferation or the biological pathway in which a proliferation-required gene or its gene product lies cor a gene on which the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibicitic; (10) profilling a compound's activity; (11) a culture comprising strains in which the gene compound's activity; (11) a culture comprising strains in which the gene product is overapressed or underexpressed; (12) determining the extent to which each of the strains is present in a culture or collection of strains; or (13) identifying the target of a compound that inhibits the compound of an organism. The antisense nucleic acids required for cellular proliferation to isolate candidate molecules for rational conditions or screening for homologous nucleic acids required for proliferation in cells other than S. S. typhimurium, c. M. pneumoniae or P. aeruginosa. The present sequence is encoded by one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from wipo at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            75 LDVKPVGIADDNKKNRIIKPLRDKIGKYTSVGTRKQPNLEEISKLKPDLIIADNNRHKGI 134

This sequence represents a Staphylococcus aureus protein sequence of the invention. The DNA sequences encoding the S.aureus proteins are recorded on a computer readable medium, preferably selected from a floppy or hard disk, random access memory (RAM), read-only memory (ROM) or CD-ROM.

Co disk, random access memory (RAM), read-only memory (ROM) or CD-ROM.

Co functions to be assigned so that protein-encoding or regulatory regions of commercial, therapeutic or industrial importance can be obtained.

Specifically, sequences which are likely to encode antigens have been identified and these polypeptides can be used in a waccine composition cagainst S.aureus infection. The polypeptides can also be used in a kit for the immunodetection of S.aureus in a sample. S.aureus is implicated in numerous human diseases, including cellulitis, eyelld infections, food consoning, osteomyelitis, skin and surgical wound infections, scalded skin syndrome, toxic shock syndrome, etc. Organisms transformed with the Shin syndrome, toxic shock syndrome, etc. Organisms transformed with the CD DNA sequences can be used for recombinant production of the polypeptides.

CC DNA sequences can be used for recombinant production of the polypeptides.

CC DNA sequences (and their fragments) are useful as primers or probes for isolating homologues of any of the 5191 S.aureus DNA sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     63 ATDVAVSLGVKPVGAVESWTQKPKFEYIKNDLKDTKIVGQEPAPNLEEISKLKPDLIVAS 122

                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This sequence represents Staphylococcus aureus cbrA protein. The cbrA protein is predicted to have a molecular weight of about 36.8 kD and, along with cbra (AAY42332) and cbrC (AAY42333), is thought to be involved in iron regulation, based on amino acid sequence homology with known iron regulator proteins. S. aureus is a ubiquitous pathogen which causes infections, neonatal conjunctivitis, evelid infections, food poisoning, joint infections, neonatal conjunctivitis, osteomyelitis, skin infections, carteus is increasingly becoming resistant to known antibiotics, with methicillin-resistant strains generally being multiply drug resistant. Methicillin-resistant S. aureus (MRGA) poses serious infection control problems, with many strains being multiresistant against virtually all antibiotics with the exception of the vancomycin-type glycopeptide antibiotics. The protein may be useful to screen potential antagonists with could be used as antibiotics and it may be used as a vaccine to prevent or attenuate an infection caused by a member of the

           homology to known proteins involved in iron regulation. The invention provides 11 novel genes (see AAZ19882-92) of S. aureus and the provides 11 novel genes (see AAZ19882-92) of S. aureus and the host cells, antibodies and hybridomas. The invention further relates to screening methods for identifying agonists and antagonists of S. aureus polypeptide activity, and to diagnostic methods for detecting staphylococcus nucleic acids, polypeptides and antibodies in a biological sample. Antagonists of cbrA may be useful as antibiotics to treat infections of S. aureus and other Staphylococcus spp. Also provided are novel vaccines for the prevention or attenuation of infection by Staphylococcus. CbrA polypeptides can also be used to detect S. aureus in immunoassays, as epitope tags, mol.wt. markers, to raise antibodies and as vaccines against S. aureus and other Staphylococcus infections
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       YKKEITMDKNQKVLPAVAAKSGLLAHPSN-----SYVGQFLSQLGFKEALSDDVTKGL 240

The invention relates to a novel method for identifying, isolating and producing hyperimmune serum-reactive antigens from a pathogen, tumour, allergen, a tissue or host prone to auto-immunity, where the antigens are used in a vaccine, comprises providing antibody preparation from a plasma cool of a type of animal, or individual sera with antibodies against the pool of a type of animal, or individual sera with antibodies against the specific pathogen, tumour, allergen, tissue or host prone to auto-cimmunity. The hyperimmune serum-reactive antigens comprising any of the sequences of 53-2261 amino acids fully defined in the specification, or their hyperimmune fragments are useful for the manufacture of a pharmaceutical preparation, particularly a vaccine against staphylococcal infections or colonisation against S. aureus or S. epidermidis. The preparation of antibodies is useful for the manufacture of a medicament or against S. aureus or S. epidermidis. The antibody preparations may also be used for diagnostic and imaging purposes. Other conditions that can be treated include cancer, autoinmune diseases or infections caused by viral (e.g. HIV, hepatitis A, B or C), fungal or protozoan pathogens. This sequence represents a staphylococcal protein relating to the method for identifying and producing pathogen specific antigens of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |:::| |:|||||: | |::|| |: ||||||||| |: ||:::|| |: || |:::|| |: || |: ||:::|| |: || |: ||:::|| |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |: || |:

```
Novel surface-exposed immunogenic polypeptide of Staphylococcus aureus containing receptors for siderophores or iron-binding ligands, useful for producing antibodies effective against Staphylococci infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present sequence is that of a novel Staphylococcus aureus surface-exposed immunogenic polypeptide (SEIP). To isolate SEIP genes, an expression library of S. aureus genomic DNA was screened with anti-SEIP antisera. DNA was isolated from clones expressing SEIPs, and amino acid domains. The present SEIP has sequence homology with the siderophore family of periplasmic binding proteins. The invention provides methods for the identification, production and recovery of SEIPs. The SEIPs can be used individually, or in combination, to produce anti-staphylococal antibodies useful in passive or active immunisation strategies to prevent or contain staphylococcal infection. They can also be used to develop
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               63 ATDVAVSLGVKPVGAVESWTQKPKFYIKNDLKDTKIVGQEPAPNLEEISKLKPDLIVAS 122

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      62
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Isolating microbial target surface exposed immunogenic polypeptides, by immunizing host with microbial membrane-associated polypeptides to produce antibodies and using antibodies to isolate target polypeptides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to the isolation of target surface exposed immunogenic polypeptides (SEIP) from microorganisms. The SEIP's of the invention are receptors of iron-binding molecules. The activity of polypeptides of the invention may be described as antibacterial, fungicide and protozoacide. Pharmaceutical compositions based on the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      polypeptides of the invention are useful for treating infections and diseases caused by microbes including bacteria, fungi and protozoa in epatient. They are also useful for topical disinfection in an animal or mammal e.g. human. The current sequence represents an SEIP of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             LKILSVIGLLFVLIATAACGNNSSSNSSKESSKDGVEIKHEEGTTKVPKHPKRVVVLEYS

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention describes a new isolated nucleic acid molecule comprising: a sequence that is 91% identical to a fully defined sequence having 586-226 bp, or its complement; or a sequence encoding a polypeptide having a fully defined sequence comprising 136-691 amino acids, or its complement. The gene is Staphylococcus aureus gene. The nucleic acid is useful for preparing a vaccine against infection caused by Staphylococcus aureus. The methods are useful for preventing or attenuating an infection caused by a Staphylococcus, detecting Staphylococcus nucleic acids in a biological sample obtained from an animal, and detecting Staphylococcus auritobodies in a biological sample obtained from an animal. This is the amino acid sequence of Staphylococcus aureus cbrA protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    63 ATDVAVSLGVKPVGAVESWTQKPKFEYIKNDLKDTKIVGQEPAPNLEEISKLKPDLIVAS 122

The invention relates to an isolated nucleic acid comprising any one of the 6213 antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are: (1) a vector comprising a promoter operably linked to the nucleic acid concluded are: (2) a host cell containing the vector; (3) an isolated cucleic acid; (2) a host cell containing the vector; (3) an isolated contisense nucleic acid; (4) an antibody capable of specifically binding cartisphenica; (5) producing the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation or the activity of a gene in an operon required for conjudence or the farm an activity against a biological pathway required for proliferation, or that has an activity against a biological pathway in which a proliferation or the biological pathway in which a proliferation required gene or the biological conspund's activity; (11) a culture compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a congound's activity; (11) a culture comprising strains in which the gene congration of the strains is present in a culture or collection of strains; or (13) identifying the target of a compound that inhibits the

         identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence is encoded by one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at

The invention relates to isolated polynucleotide (I) and polypeptide (II)

sequences. (I) is useful as hybridisation probes, polymerase chain

creation (PRX) primers, oligomers, and for chromosome and gene mapping,

and in recombinant production of (II). The polynucleotides are also used

can diagnostics as expressed sequence tags for identifying expressed

consideration gene therapy techniques to reserve normal

cativity of (II) or to treat disease states involving (II). (II) is

cuseful for generating antibodies against it, detecting or quantitating a

colypopide in fissue, as molecular weight markers and as a food

cupplympeptide in tissue, as molecular weight markers and as a food

cupplympeptide and polymucleoties sequences have applications in

characteristics, forensics, gene mapping, identification of mutations

cresponsible for genetic disorders or other trasts to assess blodiversity

cresponsible for genetic disorders or other trasts to assess blodiversity

cresponsible for genetic disorders or other trasts to assess blodiversity

can to produce other types of data and products dependent on DNA and

amino acid sequences of the invention. Note: The sequence data for this

can occupant of commat directly from WIPO at

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           8
                                                                                                                                                                                                                                                                                     The invention relates to isolated polymuclectide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PGR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymuclectides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal cutivity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food pupplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving abbarrant protein expression or biological activity. The polypeptide and polymuclectide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity responsible for genetic disorders or other traits to assess biodiversity and to acid sequences of the invention. Note: The sequence data for this parent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at the printed specification, but was obtained in electronic format directly from WIPO at the printed specification.

The invention relates to novel genes and encoded proteins from Staphylococcus aureus. A composition comprising the S. aureus protein, a nucleic acid encoding the protein, or an antibody to the protein, is useful as a pharmaceutical, particularly as a vaccine for treating or preventing infection due to Staphylococcus bacteria, specifically an infection caused by S. aureus. The composition is particularly useful for treating or preventing sepsis in a patient. The composition can also be used for diagnostics. The protein is also used in an assay for enzymatic studies and as a target for antibiotics. This sequence represents one of

The present invention provides a number of nucleotide and protein sequences from the Coryneform bacterium Corynebacterium glutamicum. These are useful for identifying the mutation point of a gene derived from a mutant of coryneform bacterium, measuring expression amount and analysing the expression profile or expression pattern of a gene derived from the expression profile or expression pattern of a gene derived from coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium. Coryneform bacteria are useful for producing amino acids, nucleic acids, vitamins, saccharides and organic acids, particularly L-lysine. The present sequence is a protein described in the exemplification of the invention. Note: The sequence date for this patent did not form part of the printed specification, but was obtained in electronic format directly from the European Patent Office
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          132 KGIYKDLMKIAPTIELKSFDGDYNENIDAFKTISKALGKEEGGKKRLEEHDKKIEBYKKE 191
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            EALYDQLSDIAPTVMSEGSGTNWNEQAE---ITAAAVNKSDEMDKLISDLDTRATELGEE 191

the 6113 antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are:

(1) a wetoor comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated polypeptide or its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation or the activity of a gene in an operon required for proliferation, (7) identifying a compound that inhibits elular proliferation; (8) identifying a gene required for cellular proliferation or the sequired for cellular proliferation of the sense of pathway in which a proliferation-required gene or its gene product lies or agene on which the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound, a activity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent to which each of the strains is present in a culture or collection of proliferation of an organism; or (13) identifying the target of a compound that inhibits the proliferation of an organism. The antisense nucleic acids required for information of an organism of an organism of an organism of an organism of collection of a compound of a compound of a compound of a compound of a compound of a compound of a compound of a compound of a compound of a compound of a compound of a compound of a compound of a compound of a compound of a compound of a compound of a compound of a compound of a compound of a compound of a compound of a compound of a compound of a compound of a compound of a compound of a compound of a compound of a compound of a compound of a compound of a compound of a compound of 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New antisense nucleic acids, useful for identifying proteins or screening
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         drug discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurtum, K. pneumoniae or P. aeruginosa. The present sequence is encoded by one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained
                                                                                                                                                                                                                                                                                                                                                      Antisense; prokaryotic essential gene; cell proliferation; drug design.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            invention relates to an isolated nucleic acid comprising any one of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Zyskind JW;

The involution relates to an inclusion where expression of the nucleic acid inhibits proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense continued acid; (2) a host cell containing the vector; (3) an isolated continued in a polypeptide or its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular continued for that has an activity against a biological pathway contiferation; (7) identifying a compound that influences the activity of the gene product or that has an activity against a biological pathway in which a proliferation or that inhibits cellular proliferation; (8) centured for cellular proliferation or the biological pathway in which a proliferation for cellular proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound value activity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent or organism acts; (9) manufacturing an antibiotic; (10) profiling to proliferation of an organism. The antisense nucleic acids are useful for strains; or (13) identifying the target of a compound that inhibits the confidentifying proliferation to isolate conditions or collection of an organism. The present sequence acids required for proliferation in cells other than S. aureus, S. typhimurium, confident file activity grown processed or prosessed or processed or processed or processed or conditions or screening for bomologous nucleic acids are useful or formed and processed or processed or conditions or screening for promolegous nucleic acids are useful or form part of the printed specification, but was obtained for provine or the 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      69 VDALVALDVKPVGIADDNKKNRIIKPLRDKIGKYTSVGTRKQP--NLEEISKLKPDLIIA 126

The invention relates to an isolated nucleic acid derived from Enterococcus faecium encoding an Enterococcus faecium polypeptide having one of 10 fully defined sequences given in the for comprising 40 acquential nucleotides chosen from any of the nucleic acids, its complement or sequences hybridishing to it). Also included are a recompliant vector comprising the nucleic acid operably linked to transcription regulatory element, a cell comprising the vector and a single-stranded probe comprising the nucleic acid. The nucleic acids are chosen from 3654 disclosed sequences encoding 3654 disclosed proteins. The nucleic acids are chosen from Eacle is useful for diagnosing pathological conditions resulting from E faecium bacterial infection (e.g. urinary tract infection, bacteraemia, endocarditis, wounds and abdominal-pelvic infection) and for screening drugs such as agonists and antagonists. The nucleic acid is useful for recombinant production of Candida albicans addrived peptides or antisense polypeptides. Pharmaceutical compositions and vaccines containing the nucleic acid are useful for preventing or treating Enterococcue faecium infections. The present sequence represents one of the containing the nucleic acid are useful for preventing or an efficient acid and processions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      15;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               286

the invention fracts to an instruction of a cell. Also included are:

(1) a vector comprising a product of a cell. Also included are:

(1) a vector comprising a product operation of a cell. Also included are:

(1) a vector comprising a product operation of a cell. Also included are:

(2) a vector comprision and a cell containing the vector;

(3) an isolated

(4) a net cell containing the vector;

(5) a host cell containing the vector;

(6) inhibited by the antisense

(7) identifying a compound that influences the activity of

proliferation or the activity of a gene in an operon required for

proliferation, (7) identifying a compound that influences the activity of

the gene product or that has an activity against a biological pathway

required for proliferation, or that inhibits proliferation of the biological

centrifying a gene required for cellular proliferation of the biological

centrifying a gene required for cellular proliferation of an

corganism acts; (9) manufacturing an antibiotic; (10) profiling a

compound's activity; (11) a culture comprising strains in which the gene

compound's activity; (11) a culture comprising strains in which the gene

compound's activity; (11) a culture comprising strains in which the gene

compound's activity; (11) a culture comprising strains in which the gene

compound's activity; (11) a culture comprising strains in which the gene

compound's activity; (11) a culture comprising strains in which the gene

compound's activity; (12) a culture comprising strains in which the gene

compound's activity; (12) a culture comprising strains in which the gene

compound's activity; (13) a culture comprising strains in which the gene

compound's activity; (13) a culture comprising strains in which the gene

compound's activity; (13) a culture compound that inhibits the

compound's activity of (13) identifying the farget of a compound that inhibits the

compound's activity of (13) identifying the carget of a compound that inhibits the

compound's activity of the strains in the activi
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            drug discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence is encoded by one of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  one of

the invention relates to an isolated nucleic acid comprising any one of the fell antisense sequences given in the specification where expression of the nucleic acid inhibites proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid concluded are:

(1) a vector comprising a promoter operably linked to the nucleic acid concluded by the antisense antisense nucleic acid; (2) an bost cell containing the vector; (3) an isolated polypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation or that has an acityly agency of the gene product or that has an acityly agency required for proliferation or that has an acityly agency required for proliferation, or that that inhibits cellular proliferation; (8) identifying a gene required for cellular proliferation or the biological pathway in which a proliferation-required gene or its gene product lies or a gene on which the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound; a activity; (11) a culture comprising strains in which the test compound that inhibits proliferation of an organism acts; (13) identifying the target of a compound that inhibits proliferation of an organism. The antisense nucleic acids required for cellular proliferation in cells of the strains is present in a culture or collection of proliferation of an organism. The antisense nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, C. and in the target profarms, or for screening honologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, C. the target prokaryotic essential genes. Note: The sequence is encoded by one of the target prokaryotic format directly from NIPO at entired sequence is encoded by one of the prince of the prince of appendication, but was obtained to the control of the prince of appendication.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          173

ABN90518 to ABN93374 represent Staphylococcus epidermidis open reading frame (ORF) nucleic acid sequences which encode the amino acid sequences given in ABP35124 to ABP37560. The S. epidermidis sequences have antibacterial activity and can be used in gene therapy. The sequences can also be used in the diagnosis and treatment of bacterial infections, particularly S. epidermidis infections. The sequences can be used to screen for compounds able to interfere with the S. epidermidis life cycle or inhibit S. epidermidis infection. N.B. The sequence data for this patent did not form part of the princed specification, but was obtained in electronic format directly from the USPTO web site
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           61 DKKKISNITVEVPKNPKNAVVLDYGALDVL----KELGVADKVKGLPKGENNQSLPKFLD 115
